Enabled – if the shipping method should be made available

Title – The name shown to your clients

Default Price – How much do you want to charge your clients for this method by default.

Rates – If you want to set different prices for some countries you can upload a csv file as described below.

Type – Choose if you would like to charge “per order” or “per item”

Calculate Handling Fee – Choose if the handling fee should be “fixed” or as a “percentage” of Price

Handling Fee – An additional charge

Ship to Applicable Countries – Choose “Specific countries” if you want to make this method available only in some countries

Ship to Specific Countries – Choose the countries where this method can be used to ship to.

Rates

Defining specific rates for each country in a shipping method.

1. **Create a CSV File.** The first row is ignored, you can use that to make the file more readable.
The name of the file is arbitrary.
2. The name of the columns is arbitrary. We always consider:

First column – The country code in ISO2 or ISO3

Second column – The price

	A	B
1	Country	Price
2	AUT	9
3	BEL	6
4	BGR	26
5	BIH	37
6	CAN	42
7	CHE	34

3. On “Rates” click “**choose file**” and then “**save config**”

When determining the price to show to your customer for a shipping method, we return the first rule that applies in order:

The price for the shipping country and website id

The price for the shipping country and default website

The “default price” set in the configuration

Pickup Points

If the carrier provides a “**Pickup Service**” we will append a button to the checkout which allows the user to select their preferred location.

3 SHIPPING METHOD

PostNL

<input checked="" type="radio"/> PostNL \$10.00	CHOOSE PICKUP LOCATION

- parcelShop: Zonneplein 23, AMSTERDAM
- parcelShop: Buikslotermeerplein 207, Amsterdam

SELECT

The map shows a section of Amsterdam, including areas like Noord, Buikslotermeer, and Amsterdam-Noord. Five yellow location pins are placed on the map, corresponding to the addresses listed in the options. The pins are located at: 1. Nieuwe Gouw 42 (Landsmeer), 2. Bezaanjachtplein 299 (AMSTERDAM), 3. Metaalbewerkerweg 3 (Amsterdam), 4. Zonneplein 23 (AMSTERDAM), and 5. Buikslotermeerplein 207 (Amsterdam). The map includes labels for various streets, canals, and landmarks, as well as a zoom control in the top left corner.

Return policy (edit with Customer)

Export

The screenshot shows an 'Orders' management interface. At the top right, there is a button labeled 'Export Preset Orders to Shiptimize'. Below this, there are filters and controls: 'Page 1 of 1 pages', 'View 20 per page', 'Total 11 records found', and a 'New Order RSS' link. There are also 'Export to: CSV', 'Export', 'Reset Filter', and 'Search' buttons. A table of orders is displayed with columns for 'Order #', 'Purchased On', 'Bill to Name', 'Ship to Name', 'G.T. (Base)', 'G.T. (Purchased)', and 'Action'. Two items are selected, indicated by blue checkmarks. A context menu is open over the 'Action' column, showing options: 'Export to Shiptimize', 'Cancel', 'Hold', 'Unhold', 'Print Invoices', 'Print Packingslips', 'Print Credit Memos', 'Print All', and 'Print Shipping Labels'. A blue arrow labeled '2' points to the 'Export to Shiptimize' option in the menu.

	Order #	Purchased On	Bill to Name	Ship to Name	G.T. (Base)	G.T. (Purchased)	Action
Any		From: [] To: []			From: [] To: []	From: [] To: []

You have **2 options to export**

Export Preset orders - Will export only orders that were not exported before and have one of the status you configured on “**Export all**” in the configuration.

Export selected orders - Will send to the app any selected order regardless of status. This allows you to re-export orders if you delete them in the app. If you try to re-export an order that is already in the app, **the app will refuse it.**

Carrier Update

If at any time you add more carriers to your contract. Ask your contact in Shiptimize to let you know when they are active in the app. Then go to configuration and save the settings.

Every time you do this, the plugin will ask the app what information is there and update the plugin cache.

Automatic Updates

When a tracking id is available the plugin will check if there are shipments associated with the order.

If there are shipments, we will insert the trackingId in the first shipment.

If there are no shipments the plugin will create a shipment, associate it with the order and insert the trackingId in that shipment.

You can also configure automatic status updates when specific events occur. In Shiptmize, go to: **“Settings” > “Plugins” > “Shop Detail”**

You can set specific status for:

After Import

After Carrier accepts

After Delivery

MENU
